

Note: This IBM PC BIOS API call is for DOS/Win16 personality only. Use [Family API](#) for portability.

Note: [osFree Macro Library](#) provides macros for most of functions

2022/03/13 05:41 · prokushev · [0 Comments](#)

Int 14H, AH=00H

Version

IBM 5150 and higher

Brief

Initialize serial port

Family API

[DosDevIOCtl](#)

Input

- AH = 00h
- AL = port parameters (see #00300)
- DX = port number (00h-03h) (04h-43h for Digiboard XAPCM232.SYS)

Return

AH = line status (see #00304)

FFh if error on Digiboard XAPCM232.SYS
AL = modem status (see #00305)

Macro

```
INCLUDE BIOS.INC
```

```
@AuxInit 0, A3H
```

Notes

- default handler is at F000h:E739h in IBM PC and 100% compatible BIOSes since the PCjr supports a maximum of 4800 bps, attempting to set 9600 bps will result in 4800 bps
- various network and serial-port drivers support the standard BIOS functions with interrupt-driven I/O instead of the BIOS's polled I/O
- the 1993/04/08 Compaq system ROM uses only the low two bits of DX
- the default setting used by DOS (MS-DOS 6, DR-DOS 7.03, PTS-DOS) when (re-)initializing the serial devices is AL=A3h (2400 bps, no parity, 1 stop bit, 8 data bits).

Note

Text based on [Ralf Brown Interrupt List Release 61](#)
